Summary

Unity Game Developer with expertise in 2D/3D game development, gameplay programming, and interactive systems using C#. Experienced in building gameplay mechanics, AI systems, combat features, player systems, and progression systems through professional and independent game development. Successfully shipped a Unity game as a solo developer, with the game available on Google Play.

Technical Skills

Programming: C#, C++ (Basics), Object-Oriented Programming.

Game Development: Unity Engine, Gameplay Programming, Game Mechanics, AI Systems, State Machines, UI Systems, Mobile Game Development, 2D/3D Game Development.

Tools: Git, GitHub, GitLab, Visual Studio.

Software Practices: Debugging, Testing/QA, Bug Tracking, Agile Development, Version Control.

Deployment: Android, Google Play Publishing.

Work Experience

Founder — Incline Games

2026 – Present

Solo Game Developer

- Independently developed and shipped You Runman! using Unity and C#, handling all programming and development work except asset creation.
- Managed the game's gameplay implementation, systems integration, testing, debugging, polishing, and deployment process as the sole developer.

Unity Developer Intern — Akiyam Solutions Pvt. Ltd.

Nov 2025 – May 2026

Unity Developer Intern

- Developed 10+ gameplay features and scripting systems using Unity and C#.
- Participated in 15+ feature verification and quality assurance cycles during the game development lifecycle.
- Tested 20+ development builds and documented gameplay issues for rapid resolution.
- Collaborated with senior developers throughout a 6-month internship to validate gameplay features.
- Utilized GitLab for version control and collaborative Unity development workflows.

Projects

You Runman! (Unity) — Launched on Google Play

Aug 29, 2026

- Published a complete android game, independently handling gameplay programming, systems, UI functionality, testing, debugging, polishing, and technical implementation except asset creation.
- Engineered a 2-second inactivity trigger causing player explosion to create a hidden movement-based gameplay challenge.
- Programmed a police chase AI system using player pursuit logic to support the game's core escape mechanic.
- Configured 2 core player systems for movement and camera control across multiple gameplay levels.
- Integrated 1 gold collection mechanic with interactive GameObject scripting for level objectives.
- Architected 2 progression systems for functional UI and level selection across the game's playable content.

DeadShift (Unity) — Prototype

Dec 2025 – Feb 2026

- Constructed a 3D wave-based survival shooter prototype featuring 5+ core gameplay systems including combat, health, enemy AI, wave progression, and weapon interaction.
- Optimized 2 camera modes (third-person and aiming) alongside a modular combat system.
- Built a wave system that increases enemy count by 3 enemies per wave to create scalable gameplay difficulty.
- Structured gameplay logic across 20+ C# scripts to maintain modularity, reusability, and feature expansion.
- Created 2 complete cinematic sequences and gameplay transitions to enhance player immersion.

Education

VIT Bhopal University

B.Tech in Computer Science Engineering (Gaming Technology)

Sep 2023 – Sep 2027

CGPA: 8.59/10.0
